MARCH 2020

FOREWORD

I take this opportunity to putforth before you the Revised Curriculum for Second Year(SEM III & IV) Diplomain Computer Engineeringunder Rationalised Semester System to be implemented from academic year 2020-21.

Dr.VivekB. Kamat, Director, Directorate of Technical Education triggered the idea of revision in Curriculum for various Diploma Programmes under 03/04 years Diploma Programmes. Director was instrumental in motivating the teaching faculties, offering technical guidance on continual basis for timely completion of said endeavour.

Dr. Krupashankara M.S. Chairman, BTE inspired the members of various Committees with NBA guidelines, January 2019. As per directives of Chairman BTE, Committees could execute CO-PO mapping, define the various levels as per Bloom's taxonomy and thus can generate balanced question papers for internal/Board Examination.

I would like to appreciate Chairman of Courses committees alongwith sub-committee members, for having carried out the work, within the given schedule. I take this opportunity to thank Dr. V.N. Shet, Ex-Chairman, Board of Technical Education- Goa, Ms. Anjali Sardessai, Ms. Seema Naik, Mr. Rama Subhaji and all others who have directly/indirectly helped Board in achieving the goal.

This improvised Curriculum shall be beneficial to students Community at large, with updated knowledge database and can offer them better opportunities to seek employment in their relevant fields.

Thanking you,

(Shri.N.V.T. Pednekar) Secretary Board of Technical Education,Goa

VISION

To develop globally competent Engineers with professional attitudes, sound ethical values and foster entrepreneurship

DEPARTMENT MISSION

M1: To practice global standards of teaching learning processes with state of art laboratories and infrastructure.

M2: To enhance knowledge and skills of faculty and staff in Computer Engineering through continuous education.

M3: To provide career guidance and placement assistance to the students of Computer Engineering through industry-institute interaction.

M4: To develop a professional and ethical work culture among students of Computer Engineering with concern for environmental issues and sustainability.

M5: To stimulate innovative thinking and foster entrepreneurship.

PROGRAM OUTCOMES (POs)

PO1. Basic and Discipline specific knowledge: Apply knowledge of basic mathematics, science and engineering fundamentals and engineering specialization to solve the engineering problems.

PO2. Problem analysis: Identify and analyse well-defined engineering problems using codified standard methods.

PO3. **Design**/ **development of solutions:** Design solutions for well-defined technical problems and assist with the design of systems components or processes to meet specified needs.

PO4. Engineering Tools, Experimentation and Testing: Apply modern engineering tools and appropriate technique to conduct standard tests and measurements.

PO5. Engineering practices for society, sustainability and environment: Apply appropriate technology in context of society, sustainability, environment and ethical practices.

PO6. Project Management: Use engineering management principles individually, as a team member or a leader to manage projects and effectively communicate about well-defined engineering activities.

PO7. Life-long learning: Ability to analyse individual needs and engage in updating in the context of technological changes.

PROGRAM SPECIFIC OUTCOMES (PSOs)

PSO1:Design, develop, install and maintain hardware and software-based systems.

PSO2:Gain knowledge in diverse areas of Computer Engineering for successful career, entrepreneurship and higher studies.

(CM302) OPERATING SYSTEM

1. COURSE OBJECTIVES:In this course the students will learn the basic concepts of operating system, its functions, types and structure. They will understand about process and how the operating system manages the processes and memory of a computer. They will familiarize with deadlocks and various deadlock strategies. They will also study security management in operating system.

2. PRE-REQUISITES: Knowledge of Computer Hardware.

(CC309) DIGITAL ELECTRONICS
1. COURSE OBJECTIVES:

The students need to learn basic concepts of digital circuits and system which leads to design of complex digital system such as microprocessors.

The students need to know combinational and sequential circuits using digital logic fundamentals. This is the first course by which students get exposure to digital electronics world.

The students will able to

- 1. To understand various number representations and conversion between different representation in digital electronic circuits.
- 2. To introduce the students to various logic gates, SOP, POS and their minimization techniques.
- 3. To analyze logic processes and implementation of logical operations using combinational logic circuits.
- 4. To understand, analyze and design sequential circuits

3. COURSE OUTCOMES:

On successful completion of the course, the student will be able to:

CO1: Relate the knowledge of Number Systems in Digital Applications.

- CO2: Build different Sequential and Combinational Circuits.
- CO3: Simplify logical problems using digital circuits.

CO4: Develop basic digitalelectronics circuits.

(CM402) INTRODUCTION TO DATABASE MANAGEMENT SYSTEMS

1. AIM: To provide broad understanding of the basic concepts of database management system in particular relational database system.

2. COURSE OBJECTIVES: In this course thestudents will learn the following:

- 1. Understand the need and uses of database.
- 2. Learn designing of a database.
- 3. Use data manipulation language to query, update and manage a database.
- 4. Understand the concepts of transactions and database security.
- 3. PRE-REQUISITES: Elementary knowledge about computers and computer programming.

(CM405)DATA COMMUNICATION & COMPUTER NETWORKS

1. AIM: To provide students with an overview of the concepts and fundamentals of data communication and computer networks.

2. COURSE OBJECTIVES: In this course thestudents will learn the following:

- 1. Understand the concept of Data Communication
- 2. Learn Data encoding/decoding techniques, Basics of Computer Networks, Switching Techniques and Network Topologies
- 3. Understand OSI Model, Transmission Control Protocol/Internet Protocol Suite, Data link layer protocols
- 4. Study Network and Transport layer services and Protocols.

3. PRE-REQUISITES: Knowledge of Computer Hardware and peripherals.
